Regional Research Frontiers - Vol. 1

Innovations, Regional Growth and Migration

Series: Advances in Spatial Science

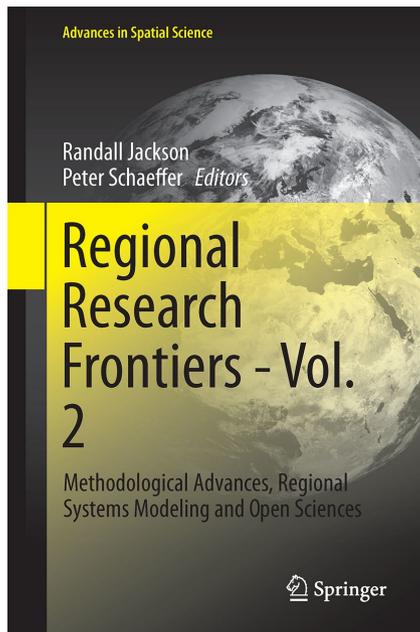

- ▶ Identifies trends and future developments in the areas of innovation, regional growth and migration
- ▶ Covers research areas such as mobility, regional forecasting, and regional policy, and includes expert contributions on disasters, resilience, and sustainability
- ▶ Builds on recent methodological and modelling advances, as well as on extensive policy-analysis experience

This volume focuses on frontiers in regional research and identifies trends and future developments in the areas of innovation, regional growth and migration. It also addresses topics such as mobility, regional forecasting, and regional policy, and includes expert contributions on disasters, resilience, and sustainability. Building on recent methodological and modelling advances, as well as on extensive policy-analysis experience, top international regional scientists identify and evaluate emerging new conceptual and methodological trends and directions in regional research. This book will appeal to a wide readership, from regional scientists and economists to geographers, quantitatively oriented regional planners and other related disciplines. It offers a source of relevant information for academic researchers and policy analysts in government, and is also suitable for advanced teaching courses on regional and spatial science, economics and political science.

Regional Research Frontiers - Vol. 2

Methodological Advances, Regional Systems Modeling and Open Sciences

Series: Advances in Spatial Science

- ▶ Identifies methodological advances as well as trends and future developments in regional systems modelling and open science
- ▶ Covers research areas such as interindustry modelling, computable general equilibrium models, exploratory spatial data analysis, geographic information science, spatial econometrics
- ▶ Builds on recent methodological and modelling advances, as well as on extensive policy-analysis experience

This is the second volume in a two-part series on frontiers in regional research. It identifies methodological advances as well as trends and future developments in regional systems modelling and open science. Building on recent methodological and modelling advances, as well as on extensive policy-analysis experience, top international regional scientists identify and evaluate emerging new conceptual and methodological trends and directions in regional research. Topics such as dynamic interindustry modelling, computable general equilibrium models, exploratory spatial data analysis, geographic information science, spatial econometrics and other advanced methods are the central focus of this book. The volume provides insights into the latest developments in object orientation, open source, and workflow systems, all in support of open science. It will appeal to a wide readership, from regional scientists and economists to geographers, quantitatively oriented regional planners and other related disciplines. It offers a source of relevant information for academic researchers and policy analysts in government, and is also suitable for advanced teaching courses on regional and spatial science, economics and political science.
